

FY18 ERP Survey Questions

Note: For Informational Purposes Only. The Survey has already been administered. Please register on EBRAP.ORG to participate in future Surveys.

- 1) What would be an ideal granting mechanism to accelerate research in post-traumatic epilepsy (e.g. Translational Research or New-Investigator targeted)?
- 2) What are some of the basic research hurdles needed to understand how TBI-related seizure activity becomes PTE? Can these hurdles be addressed in a uniformed approach?
- 3) What pre-clinical or translational strategies are available to address (e. g. prevent) acute TBI seizure activity before it becomes chronic PTE?
- 4) What do you think are the biggest hurdles towards PTE pharmacological interventions for sustained seizures?
- 5) How can the epilepsy community improve data sharing and standardization between laboratories and clinics outside of the use of common data elements?
